

INSTRUCTIONS FOR INSTALLATION OF YAKTRAX PRO STRAPS

Attach YAKTRAX to your shoe.

Once attached to your shoe the wording will be upside down when you look down at your shoe with the strap attached.

There is a left and right strap. If you hook the Velcro together and are looking at the strap upside down, the left strap has the metal loop on the left; the right strap has the metal loop on the right.

Pull the Velcro apart and insert the strap into the outside loop (the loop on the outside of each foot). So, if you are looking at your left foot, you insert the strap on the left side of the shoe.

Pull the strap through the Yaktrax until you almost pull the metal loop out of the hole. Do not pull the strap all the way through.

Now, thread the end of the strap through the loop. Pull tight all the way to the end.

Pull the strap over the top of your shoe and insert into the inside loop. Pull tight over the top of your shoe and fasten the Velcro.

Do the same for the other shoe.
